

## **SuiteCRM Record Restore Manager**

### **Installation/Configuration Guide**

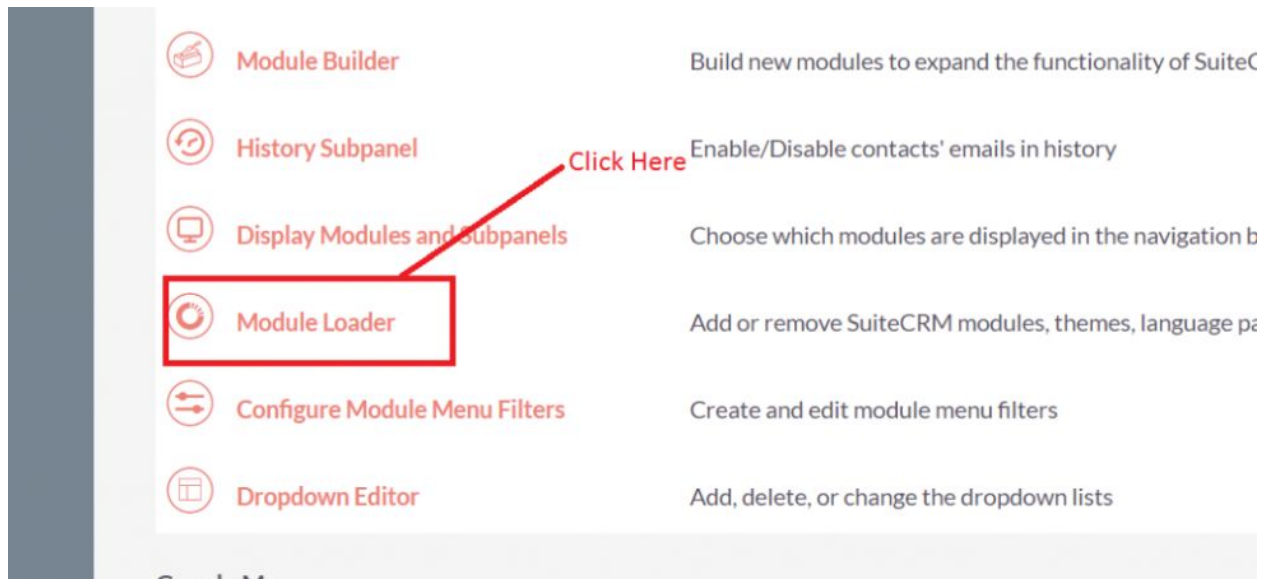

## Pre-requisites

Please follow the below steps before installing the Record Restore Manager.

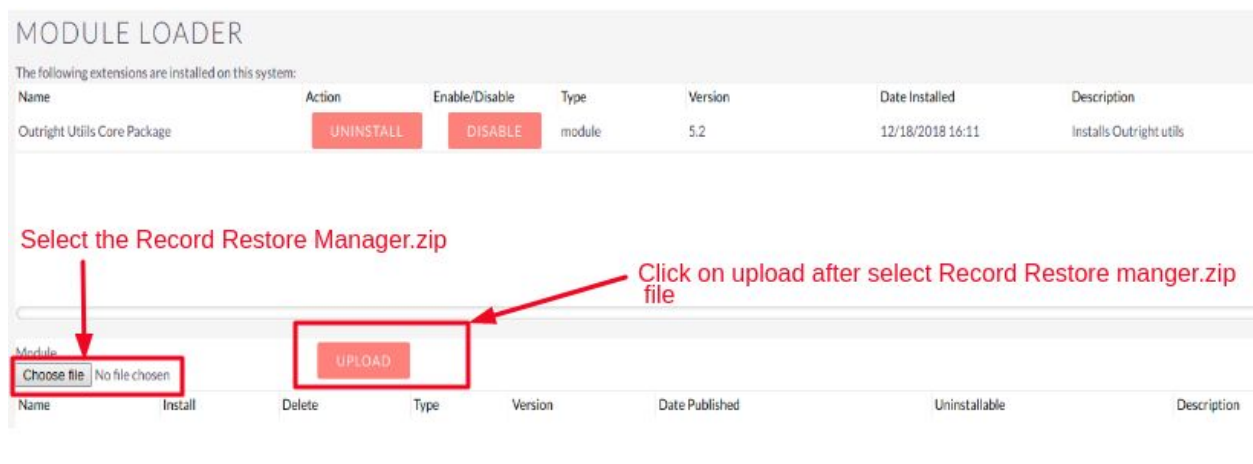

1. Log in as an Administrator.
2. Verify the CRM version should be compatible with Record Restore Manager.
3. CRM should have the Outright utils, if not then install the OutrightUtils package first then install the Record Restore Manager.

## Installation Guide:-

1. Go to the Administration page.
2. Click on “**Module Loader**” to install the package.

3. Click on “**Choose File**” button and select the Record Restore manager.zip.

- Click on “Upload” to upload the file in CRM and then click on the Install button.

6. Click on **"Quick Repair and Rebuild"** and click on execute button.

Differences found between database and vardefs

The following script will sync the database structure with the structure defined in the vardefs. You have the option of exporting this script and then running it against your database using external database management module to run the script.

**NOTE:** any changes you make to the script in the textbox will be reflected in the exported or executed code.

```
/* Table : outr_outright_record_restore_manager */
/* MISSING TABLE: outr_outright_record_restore_manager */
CREATE TABLE outr_outright_record_restore_manager (id char(36) NOT NULL ,name varchar(255) NULL ,date_entered datetime
NULL ,date_modified datetime NULL ,modified_user_id char(36) NULL ,created_by char(36) NULL ,description text NULL ,deleted
bool DEFAULT '0' NULL ,assigned_user_id char(36) NULL ,record_id varchar(55) NULL ,record_module varchar(155) NULL ,
PRIMARY KEY (id)) CHARACTER SET utf8 COLLATE utf8_general_ci;
```

Click here to execute above query

**EXECUTE** **EXPORT**

[Return to Administration page](#)

**NOTE:** after installing each plugin, It is mandatory to repair and execute.
